"The fact that we are confident in delivering a full range of solutions allows us to offer the correct individual procedure for the best result," says the Stanford University-trained physician about his comprehensive practice, Struck Plastic Surgery. "We are not predisposed to a specific plan, nor are we limited in what we can propose. Patients truly benefit when you are able to marry the latest in technology and injectables with a host of minimally invasive surgical procedures. We provide our patients with a full range of service options, as a large scope of procedures enables us to customize treatments to each individual patient."

According to Dr. Struck, establishing a sound rapport is the most important ingredient toward developing a healthy doctor-patient relationship. More specifically, he prides himself on personally performing every treatment—whether the patient is interested in surgical procedures or nonsurgical treatments like injectables and lasers. Dr. Struck's sub specializations include facial rejuvenation and body contouring. With the former, he enjoys addressing underlying facial structures through combination therapies, including skin resurfacing treatments, fillers and holistic therapies. "A complete approach results in less time off work and a more dramatic improvement." In addition to Dr. Struck's central Atherton, California, location, patients enjoy the convenience of using two satellite offices for consultations and postoperative appointments. "We're committed to doing whatever we can to enhance every patient's experience, assisting them in achieving their cosmetic goals."

DR. STEVEN K. STRUCK

WHY DID YOU BECOME A PLASTIC SURGEON Each patient is an opportunity to create a customized plan **WHAT ONE WORD BEST DESCRIBES YOUR BEDSIDE MANNER** Approachable **WHAT ONE LIFESTYLE CHANGE COULD MOST BENEFIT OUR HEALTH** Take the Açai berry from Brazil—a powerful antioxidant **HOBBIES** Skiing and training for triathlons **I'M NEVER WITHOUT** My wedding ring **FAVORITE HISTORICAL FIGURE** Lance Armstrong **I WOULD LIKE TO BE REMEMBERED AS** A good father

INSIDE INFORMATION

FRAXEL FOCUS

Dr. Struck, an aficionado of the Fraxel™ SR Laser, began using the original technology in 2004, upon its introduction to the medical field. "We're on the **FOREFRONT OF CUTTING-EDGE TECHNOLOGY**. We feel it enhances our range and perspective, making us more **INCLUSIVE AND KNOWLEDGEABLE**." Widely published on the subject of fractional laser resurfacing, he is a strong proponent of the new and improved Fraxel laser, Fraxel™ SR1500 Laser, or Fraxel 2, recently brought to market. "The first generation Fraxel offered patients a non-ablative vehicle to correct photo damage of the face, neck, hand and chest areas—without much downtime. The second generation Fraxel laser brings additional advantages associated with **REVIVING MORE YOUTHFUL APPEARANCES**." Dr. Struck is excited about the upgrade. "Fraxel 2 has been shown to penetrate twice as deep as its predecessor, directly stimulating collagen to renew a more youthful glow," he says. "Despite the higher energy, the level of heat and minimal discomfort has not changed. This new laser really performs. While the prior machine was an excellent solution for photo damage, this machine really addresses fine lines. I've even used it successfully for stretch marks. Fraxel will continue to evolve and remain an important part of our repertoire."

"I believe a wide variety of options is the key to providing a high level of service."

—STEVEN K. STRUCK, MD
